Abstract

A letter to the mercury-poisoned, their parents and guardians, and the media.

I am weary of those apologists for Thimerosal in medicine who, faced with the realities set forth in this title, continue to support the use of Thimerosal in vaccines and other medicines and medical preparation systems *without* any unequivocal toxicological proof of what is the SAFE level of Thimerosal in any of these products.

Keywords: Thimerosal, Thimerosal-containing vaccines
