Abstract

A protest resignation from the American Academy of Pediatrics (AAP), by a pediatrician with two decades of membership, is precipitated by the organization’s sellout of the world’s children by a policy that arrogantly and blindly ignored basic toxicology and safety limits when it involved vaccine and enabled a dangerous immunization mandate by the compromised Centers for Disease Control (CDC) via publication of CDC sponsored low quality epidemiology studies showing no connection between vaccines with Thimerosal written by individuals involved in producing Thimerosal-containing vaccines without disclosure (the conclusion of the studies showed Thimerosal removal caused autism). The AAP is fully aware of the untainted CDC analysis presented at the secret Simpsonwood conference and has known for almost a decade that Thimerosal causes neurodevelopmental disorders. Perpetuating the myth that affected children have come to the fore only because of better diagnosing, or because of a genetic epidemic (there are no genetic epidemics), the AAP has helped to subject the world’s children to environmental triggers that effect both mitochondrial function and brain activity. Driven by hubris and the largesse of vaccine manufacturers, the AAP has helped cause the loss of valuable time to rectify the crisis, the loss of a generation of children and perpetuated untold suffering worldwide.
